calypso washer repair manual

It is a good washer design for the most part but is notorious for pump problems. This washer style is slightly more complicated than most top loading washers. Its mechanical functions are controlled by two control boards, the Machine Controller Board and the Motor Control Board, as well as several sensing devices. This Calypso washer repair guide will cover the components used in the calypso washing machine, troubleshooting common calypso washing machine problems, calypso washing machine diagnostic modes, Calypso error codes, and information to help with testing individual calypso components. When a button is pressed temporary contact is made with in the membrane allowing the machine controller board to log the command and initiate the appropriate cycle and wash options. The Machine ControllerThe Calypso washer is equipped with a peekaboo mode that allows the washer to continue nutation for 5 seconds after the lid has been opened. After the lid is closed the start button must be pressed to continue the wash cycle. The horsepower motor draws five to sevenIt uses a voltage output from the motor controller and operates at variable ACThe Motor Controller provides a variable frequency signal to the motor,Checking voltages to the drive motorBy being reversible, the. Water fill temperatures can be either HOT hot water valve only, WARM both the hot and cold water valves or COLD cold water valve only. The WATER TEMP can be changed at any time during the wash cycle. Pressing the END OF CYCLE SIGNAL keypad toggles between these options by lighting one of the LEDs and beeping the corresponding end of cycle signal at the volume level selected. The Machine Controller interfaces with the Motor Controller to operate the Drive motor and Pump motor through their vari ous functions during the cycle. The Machine Controller also directly operates the water fill and dispenser solenoids, interprets the thermistor readings, lid switch condition, as well as the position of the contacts in the Operating and. During the Peekaboo Mode, the electronic control will allow the machine to nutate at 150 NPM for a maximum of 5seconds after the washer lid is opened. When the lid is closed, the Start pad must be pressed to continue the cycle. This levels the outer wash plate so that the spin basket spins without an out of balance condition that would be caused by a tilted wash plate. The Drive Motor is linked to the drive mechanisms by a stretch belt. The belt transfers the motion of the Drive Motor to a Drive Pulley. The Drive Pulley has a splined hub, into which the Nutate Shaft is inserted and is in motion in whichever direction the Drive Pulley is turning. The operating pressure switch, marked OPR, controls the amount of water that enters the tub during normal wash and rinse functions. This switch operates in the same manner as similar pressure switches through a pressure switch tube, diaphragm and switch. By being reversible, the motor provides for two separate operations of the

washer. <http://eczanemuhendisleri.com/userfiles/eos-400d-digital-camera-user-manual.xml>

Outer Tub The Outer Tub sump plays a role in the drain and water recirculation function. The sump area includes two check balls that direct water flow when the water pump operates in the drain and recirc direction. This causes the water pump to draw the water from the tub through the recirculation port, forcing the drain check ball to seal the drain sump port and force the water through the drain hose. Drain Check Ball seals off Drain port, due to positive pump pressure, forcing water out the drain hose. When there is a contradiction, the cycle sheet itself has priority. Nutate is a counterclockwise CCW rotation of the motor. 16. Step Spin. Drive motor ramps up to speed following specific motor profiles. 17. Use this cycle to get 13 to 17 minutes of medium speed wash action and high speed final spin. For maximum soil and stain removal, liquid chlorine bleach must be used. Cleaning starts with a spray of water and detergent mixture to thoroughly saturate your large load. The preset cycle wash time is 15 minutes. The preset cycle wash time is 14 minutes. Cycle combines extralow speed spray cleaning and wash action to provide gentle care for delicate items such as wool sweaters and silk blouses. Low spin speed helps garments maintain their shape. The preset wash time is 6 minutes. This lasts for about one minute and is followed by a brief period of extra low wash action. Soaking in this washer is different than in a conventional washer. The washer sprays the load with water and detergent for 4 minutes at extra low spin speed followed by a brief period of wash action at the speed of the selected cycle.

The time displayed will include an estimate of how long it will take to fill and drain the washer. Fabric softener can be added to the Fabric Softener dispenser. ESD may damage or weaken the electronic control assembly. Both pressure switches are removed in the same manner. 1. Disconnect power from the washing machine. 2. Place the console in the service position. 3. Once this is done, the universal joint assembly can be lifted from the basket. 12. The basket can now be lifted from the tub. NOTE It may be necessary to spread apart one of the drive block sections to loosen the basket from the splines of the spin tube. These should fit together when reassembling the inner wash plate over the universal joint. Ujoint Grommets NOTE Do not rotate the inner wash plate when reassembling to the universal joint. Rotating the plate may move the leveler to its tilted position which may cause the grommets to slip. NOTE The two 2 screws at the top of the bracket have ball ends.
